

SOFTWARE TEST PLAN (STP)

Event Management System

Item	Details
Project	Event Management System
Document	Individual Software Test Plan
Version	1.0
Contributor	L.A. Gokul
Contribution	Introduction, Overall Description, System Features and related Acceptance Tests
Date	15-09-2026
Status	Draft

1. Introduction

1.1 Purpose

This Software Test Plan defines the testing approach for the portion of the Event Management System contributed by L.A. Gokul (PES2UG24CS246). The testing focuses on the Introduction, Overall Description, System Features, and the acceptance criteria associated with those functional requirements in the Software Requirements Specification (SRS) Version 1.0.

1.2 Scope

The scope of this individual test plan covers the functional system features assigned to Gokul: user account creation, authentication, profile update, event creation and management, event search and details, event registration and capacity control, payment processing, ticket generation, registration cancellation, participant management, notifications, and administrator management.

1.3 References

1. Event Management System – Software Requirements Specification (SRS), Version 1.0, dated 06-09-2026.
2. Software Test Plan Template for SE.

1.4 Definitions

SRS – Software Requirements Specification; STP – Software Test Plan; RTM – Requirements Traceability Matrix; FR – Functional Requirement; UAT – User Acceptance Testing; TC – Test Case.

2. Test Scope

Testing will verify whether the 15 functional requirements in the System Features section satisfy their specified acceptance criteria. Both positive and negative scenarios will be considered where the requirement defines an expected rejection or authorization condition.

3. Test Items

- User account creation and authentication
- User profile management
- Event creation, update and deletion
- Event search and filtering
- Event details display
- Event registration and capacity/status enforcement
- Payment processing
- Registration confirmation and ticket generation
- Registration viewing and cancellation
- Participant management
- Notifications
- Administrator management

4. Features to be Tested

SRS ID	Feature	Test Case
EMS-F-001	Create account	TC-REG-01
EMS-F-002	Authenticate user	TC-AUTH-01
EMS-F-003	Update profile	TC-PROF-01
EMS-F-004	Create event	TC-EVT-01
EMS-F-005	Update/delete event	TC-EVT-02
EMS-F-006	Search/filter events	TC-SRCH-01
EMS-F-007	View event details	TC-EVT-03
EMS-F-008	Register for event	TC-REG-02
EMS-F-009	Enforce capacity/registration status	TC-REG-03
EMS-F-010	Process payment	TC-PAY-01
EMS-F-011	Generate confirmation and ticket	TC-TKT-01
EMS-F-012	View/cancel registration	TC-CAN-01
EMS-F-013	Manage participants	TC-PART-01
EMS-F-014	Send notifications	TC-NOTIF-01
EMS-F-015	Administrator management	TC-ADMIN-01

5. Features Not to be Tested

The following areas are outside this individual test plan because they are not part of the System Features contribution assigned to Gokul:

- Detailed non-functional requirement validation such as response-time, availability, scalability, auditability and usability measurements.
- Detailed security requirement validation such as TLS configuration, password hashing inspection, role-based security validation and security audit logging.
- Internal operation of third-party payment and notification services; only the application behavior specified by the functional requirements is considered here.

6. Test Approach / Strategy

Testing levels:

- Functional testing – verify each functional requirement against its acceptance criteria.
- Integration testing – verify important interactions between registration, payment, ticket generation, participant and notification functions.
- System testing – verify complete user workflows through the web application.
- Acceptance testing – verify that the expected results stated in the SRS are achieved.

Testing types:

- Positive testing using valid inputs and authorized actions.
- Negative testing using invalid inputs, full/closed events and unauthorized actions where applicable.
- Regression testing after fixes or changes.

- Manual UI and API-level checks where applicable.

Entry Criteria:

- A stable build is available; required test users and sample event data are available; the application and database are accessible; and planned test cases have been reviewed.

Exit Criteria:

- All planned functional test cases are executed; all high-priority functional requirements are verified; blocking defects are resolved or formally accepted; and the RTM is updated.

7. Test Environment

Area	Environment
Hardware	Computer/laptop for web application access and testing.
Software	Event Management System v1.0 and a modern web browser.
Application	Web user interface, server-side application environment and database.
Interfaces	Database interface and configured payment/notification test interfaces where required.
Test Data	Dummy User, Event Organizer and Administrator accounts; sample events; open, closed and full-capacity events; sample registrations and payment outcomes.
Network	Network connectivity for web application access.

8. Test Schedule

Milestone	Schedule
Test case design and review	15-Sep-2026 to 18-Sep-2026
Test environment and data setup	18-Sep-2026 to 20-Sep-2026
Functional and integration test execution	21-Sep-2026 to 24-Sep-2026
Regression and final functional verification	24-Sep-2026 to 26-Sep-2026
Final RTM update	27-Sep-2026
Test summary and submission	28-Sep-2026

9. Test Deliverables

- Individual Software Test Plan
- Functional test cases
- Test data
- Test execution results/logs
- Defect reports, if defects are identified
- Requirements Traceability Matrix for EMS-F-001 to EMS-F-015
- Test Summary Report

10. Roles and Responsibilities

Role	Name	Responsibility
Developer / Technical Support	L.A. Gokul	Prepare and maintain the test plan for the assigned contribution; support integration testing; investigate defects; and provide fixes/builds.
QA/Test Lead	Hitha Shree Suresh	Coordinate team-level test execution and overall traceability.
Test Engineer	Jagriti Mohan	Design/execute assigned test cases and record defects.
Developer / Project Support	Karamsetty Aaryesh	Support implementation validation, defect triage and test-environment activities.

11. Risks and Mitigation

Risk	Mitigation
Unstable build or delayed feature implementation	Request an early build and perform smoke testing before detailed functional testing.
Insufficient test data	Prepare user accounts and events covering open, closed and full-capacity registration scenarios.
Payment or notification dependency unavailable	Use the configured test/sandbox interface where available and distinguish external-service failure from application failure.
Test environment or network downtime	Use a backup test setup where possible and record unavailable periods.
Defects found late	Execute functional tests early and repeat affected regression tests after fixes.

12. Assumptions & Dependencies

- The Event Management System build and database are available during testing.
- Test users with User, Event Organizer and Administrator roles are available.
- Sample event and registration data are available.
- Payment and notification test interfaces are available when their functional test cases are executed.
- The application can be accessed through a supported modern web browser.

13. Suspension & Resumption Criteria

Suspend testing if:

- The test environment is unavailable and blocks planned execution.
- The delivered build is unstable and blocks a significant portion of the planned functional tests.
- A critical defect prevents execution of major Event Management System workflows.

- Required test data or dependent test services are unavailable for an essential scenario.

Resume testing if:

- Blocking/critical defects are resolved and a stable build is delivered.
- The test environment and required dependencies are restored.
- Required test data and test-service access are available.

14. Test Case Management & Traceability

Each System Feature requirement assigned to Gokul is mapped to at least one functional test case. Test results shall be recorded as Pass, Fail, Blocked, or Not Executed. Defects shall be linked to the corresponding test case and SRS requirement.

SRS ID	Requirement	Test Case	Status
EMS-F-001	Create account	TC-REG-01	Not Executed
EMS-F-002	Authenticate user	TC-AUTH-01	Not Executed
EMS-F-003	Update profile	TC-PROF-01	Not Executed
EMS-F-004	Create event	TC-EVT-01	Not Executed
EMS-F-005	Update/delete event	TC-EVT-02	Not Executed
EMS-F-006	Search/filter events	TC-SRCH-01	Not Executed
EMS-F-007	View event details	TC-EVT-03	Not Executed
EMS-F-008	Register for event	TC-REG-02	Not Executed
EMS-F-009	Enforce capacity/registration status	TC-REG-03	Not Executed
EMS-F-010	Process payment	TC-PAY-01	Not Executed
EMS-F-011	Generate confirmation and ticket	TC-TKT-01	Not Executed
EMS-F-012	View/cancel registration	TC-CAN-01	Not Executed
EMS-F-013	Manage participants	TC-PART-01	Not Executed
EMS-F-014	Send notifications	TC-NOTIF-01	Not Executed
EMS-F-015	Administrator management	TC-ADMIN-01	Not Executed

15. Test Metrics & Reporting

- Percentage of planned functional test cases executed.
- Percentage of test cases passed, failed, blocked and not executed.
- Functional requirement coverage based on the RTM.
- Defect count and severity.
- Defect aging and closure status.
- Regression test results after fixes.

Reports: periodic test execution status, defect status, RTM coverage and final Test Summary Report.

Appendix A – Functional Test Cases

Test Case ID	SRS ID	Test Case	Precondition	Test Steps	Expected Result
TC-REG-01	EMS-F-001	Create account	No existing account with the same required details.	Enter valid required registration details and submit.	Account is created and confirmation is displayed.
TC-AUTH-01	EMS-F-002	Authenticate user	A registered user account exists.	Enter valid registered credentials and log in.	Appropriate authenticated user session is opened.
TC-PROF-01	EMS-F-003	Update profile	User is authenticated.	Modify permitted profile information and save.	Updated valid profile data is saved and displayed.
TC-EVT-01	EMS-F-004	Create event	User is authenticated as Event Organizer.	Enter valid title, description, date, time, venue, capacity and registration details; submit.	Event record is created.
TC-EVT-02	EMS-F-005	Update/delete event	Organizer manages an existing event.	Update permitted event details or delete the managed event.	Authorized changes are saved; deleted event is removed from active listings.
TC-SRCH-01	EMS-F-006	Search/filter events	Active event records exist.	Enter valid search/filter criteria.	Matching events are displayed.
TC-EVT-03	EMS-F-007	View event details	A selected event exists.	Select an existing event.	Configured event details and registration status are displayed.
TC-REG-02	EMS-F-008	Register for event	User is authenticated; registration is open and capacity is available.	Register for the selected event.	Registration is recorded and capacity is updated.
TC-REG-03	EMS-F-009	Reject full/closed registration	An event is full or registration is closed.	Attempt to register for the event.	Registration is rejected with an appropriate message.
TC-PAY-01	EMS-F-010	Process payment	A paid registration is applicable and payment test interface is available.	Complete applicable payment through the configured gateway.	Successful payment creates a confirmed payment record.
TC-TKT-01	EMS-F-011	Generate ticket	A registration has completed successfully.	Complete a successful registration.	Registration confirmation and ticket containing registration details are generated.

TC-CAN-01	EMS-F-012	View/cancel registration	User has an eligible registration.	View the registration and cancel it.	Registration status changes and is reflected in the user's account.
TC-PART-01	EMS-F-013	Manage participants	Organizer manages an event with participant records.	Open participant records for the managed event.	Organizer can view/manage participant registrations only for managed events.
TC-NOTIF-01	EMS-F-014	Send notification	A configured event/registration action is available.	Trigger the configured registration/event action.	Required notification is generated for the configured action.
TC-ADMIN-01	EMS-F-015	Administrator management	Administrator is authenticated.	Perform an authorized user/event/system management action.	Authorized action is recorded and reflected in the system.

Source basis: Event Management System SRS v1.0 and the provided Software Test Plan Template. This individual plan is limited to the contribution assigned to L.A. Gokul.
